NO. 1 · PROGRESS MAY – OCTOBER 2025

GREEN HORIZON TAKES OFF

What does climate change look like from 120 metres up? Green Horizon set out to answer that question with youth workers and young people from Germany, Romania and Türkiye. With drones, cameras and editing apps, they learn to document what is changing in their own regions and to turn it into stories that make people act. This first issue follows the project from the first meeting to the training course in Brașov.

First flights in a park in Brașov during the training course.

1 MAY 2025 – 31 AUGUST 2026

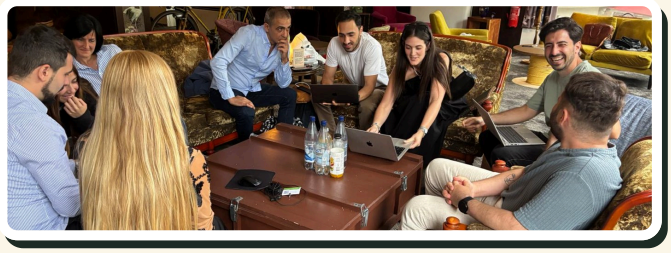

Three organisations, one horizon

Integrational e.V. (Bonn) coordinates the project and brings its experience with young people with a migrant background. Asociatia Empower Plus (Brașov) brings drone, photography and media skills, and IESA (Mersin) brings environmental education and the lead on the booklet. Together they planned seven activities, from training youth workers to a virtual exhibition.

28–29 JULY 2025 · BONN, GERMANY

The kick-off meeting

The partner teams met in Bonn to agree on who does what, finalise the timeline and milestones, set up the communication and dissemination plan and the EU visibility rules, and start preparing the training course in Romania.

Partner teams planning the project in Bonn.

TRAINING COURSE IN BRAȘOV · 11–18 OCTOBER 2025

18 YOUTH WORKERS · 6 DAYS

From pinhole cameras to drone films

Six youth workers from each partner country met in Brașov for an intensive week. They began with storytelling and photography basics, then built their own pinhole cameras from recycled materials to understand how light becomes an image. Mid-week they learned the EU drone rules and took the controls in a park, and by the end they were filming aerial shots and editing short climate films. The week closed with a screening of their films, an evaluation and Youthpass certificates.

Composition & light · **Pinhole photography** · **Photo storytelling** · **Drone safety & EU rules** · **Flight training** · **Aerial filming** · **Video editing** · **Youthpass**

Day one: expectations, contributions and fears.

DID YOU KNOW?

In the EU "open" category, a drone may fly no higher than 120 metres and must always stay in the pilot's line of sight. These rules were the first thing every participant learned before take-off.

A pinhole camera built during the course.

Picture cards: how do we see nature and our hometowns?

OPEN EDUCATIONAL RESOURCE

The Green Horizon booklet

The booklet on drone operation, photography and effective ways to mitigate climate change gathers the course content in three chapters, with practical tips, safety checklists and climate background. It is free to download and reuse under CC BY-SA 4.0.

NEXT STAGE

Back home, each team prepares a local workshop to pass on what they learned to young people in Mersin, Bonn and Brașov.
