LOCAL VOICES FROM ABOVE

The trained youth workers became trainers. In April 2026 each partner ran a one-day workshop for 20 young people in its own city: 60 young people in total, most of them using a drone controller or a video editing app for the first time. Each workshop looked at the climate issues closest to home.

19 APRIL 2026 · MERSIN, TÜRKIYE

From chaos to order

IESA opened the series with 20 young people. After an introduction to drones and the drone rules in Türkiye, the trainers took participants step by step through video editing: basic cuts, advanced transitions and how to turn raw footage into a story. The climate topics came from the region: the Mediterranean coast, summer heat, drought and the wetlands.

DID YOU KNOW?

The Mediterranean is warming faster than the global average. Coastal cities like Mersin feel it in longer heatwaves, warmer seas and pressure on water.

23 APRIL 2026 · BONN, GERMANY

The Rhine and the city

Integrational e.V. welcomed 20 young people in Bonn. They mapped climate impacts in their city, from low water and floods on the Rhine to summer heat in the streets, and discussed how parks, trees and cycling help. Because much of Bonn's airspace is restricted, they also learned how to check where flying is allowed.

DID YOU KNOW?

In the dry summers of 2018 and 2022 the Rhine ran so low that cargo ships had to sail half-empty. Low water is one of the climate signs young people in Bonn can see with their own eyes.

29 APRIL 2026 · BRAȘOV, ROMANIA

Filming with drones

Empower Plus ran its workshop with 20 young people. In Romanian, the trainers covered how a drone works, safety and rules, filming techniques (camera movement, composition, settings) and editing in four steps: import, cutting and rhythm, colour grading and export.

Filming techniques session in Brașov.

Advanced editing techniques in Mersin.

SAME FLOW, THREE CITIES

ONE PROGRAMME FOR ALL

Learn, fly, film, edit

Every workshop followed the same order: mapping local climate impacts, drone operation and safety, photo and video techniques, field work in small groups, editing with free apps and a final screening. The young people's material became the basis for three short videos, one for each country, and for the photo exhibition.

- Climate mapping
- Drone basics
- Safe flying
- Framing & light
- Phone filming
- Editing apps
- Storytelling

NEXT STAGE

Final editing, selecting the exhibition photos, and three dissemination conferences in July.
